
WirelessCarpark.com is pleased to announce ParkTrak, Inc. as a Certified Reseller

ParkTrak, Inc. will focus on selling Wireless Carpark's Event Parking Solution to universities and other clients interested in Event Parking Revenue Control.

Plainville, CT- May 30, 2012

Today, Wireless Carpark is pleased to announce ParkTrak, Inc. as a certified reseller of Wireless Carpark's Event Parking Revenue Control System. Wireless Carpark's cloud-based system increases revenue and provides strict audit controls and global reporting for flat-rate parking operations. ParkTrak, Inc. located in Spokane, WA, specializes in mobile parking solutions ranging from Enforcement and License Plate Recognition to Collections and Revenue Control. Both Wireless Carpark and ParkTrak utilize the same Intermec handheld devices for their mobile parking operations. The common Intermec handhelds make it possible for ParkTrak clients to run multiple parking applications from one device; adding another level of value for existing clients with multi-use facilities and event parking needs.

Craig Bagdon, President of ParkTrak, Inc. states, "ParkTrak and our team of distributors, see and hear about the need for a quality event parking revenue control system from our clients and prospects almost daily. We are excited to be able to offer Wireless Carpark's proven cloud technology as our answer." ParkTrak is planning to announce their promotion of the Wireless Carpark's product line at the upcoming 2012 International Parking Institute (IPI) Conference and Expo in Phoenix, AZ. The conference runs from June 10th through the 13th.

"We are genuinely excited about the opportunities, clients and experience ParkTrak brings to the table in offering Wireless Carpark's product line." says John Beyer, President of Wireless Carpark. WCP's Event Parking Management System provides revenue control and global reporting for flat rate and event parking operations. Utilizing cloud-computing technology, the WCP system is licensed by device not location and communicates over standard Wi-Fi or a cellular network. The system does not require a local server or expensive communication infrastructure; keeping costs down. WCP's architecture and design allow clients to transfer licensed devices to alternate locations without paying for additional hardware, infrastructure or licensing fees.

About WirelessCarpark.com
