

Wireless Carpark launches new website with customer portal

Parking Managers can now run audits and pull up-to-the-minute reports on one or more of their locations from a centralized portal

Plainville, CT, August 23, 2011

Today, Wireless Carpark launched their newest website www.wirelesscarpark.com. The site includes a customer portal that gives parking managers access to real-time consolidated reporting for one or more of their sites. Having accurate real-time data enables parking managers and operators to make proactive decisions that can immediately impact their parking operation(s).

The Wireless Carpark (WCP) System provides revenue control for flat-rate and event parking operations. Utilizing cloud-computing technology, the WCP system is licensed by device not location. This allows the WCP System to be utilized at one or more locations with no additional hardware or fees. With options for real-time or off-line usage, managers can get the vital reporting information they need, when and how they need it.

"It is common in the parking industry to discover issues with staffing, parking volume, or audit control after-the-fact, when it is difficult or impossible to correct. Our system gives managers the ability to see what is happening with their operation(s) from a global level, when it is happening. Managers can instantly respond; resulting in more successful events and performance." states John Beyer, a Hartford area entrepreneur and Founder of Wirelesscarpark.com, Inc.

About Wireless Carpark

Headquartered in Plainville, CT, Wireless Carpark utilizes a combination of premier hardware and cloud-computing technology to provide affordable automated revenue control to the parking industry.
